Nenolink Text Tools v0.4.1 User Manual

Nenolink Text Tools v0.4.1 — User Manual

Start and privacy

Launch the Windows TEST executable or the Python entry point. Processing is local; documents and reports are n

Main workflow

Open **Project Workflow**, create a project, choose source and target languages, select a project directory, i

The scanner refuses incompatible language pairs, missing packs, conflicting rule IDs and existing output files

Modules

- Text Marker: highlights selected expressions in a separate DOCX and produces a report.
- Translation Risk Scanner: reports rule-based translation risks.
- Language Interference Scanner: marks configured DA/Norwegian interference categories.
- Word Index: counts words with optional Danish/Norwegian stopword filtering.
- File Inventory: stores local file references and supports reuse.
- Glossaries & Rules: imports and validates local rule packs.
- Prompt Library: stores local prompt templates; no AI service is contacted.

Colors and reports

Red, orange and yellow categories describe review priority, not confirmed translation errors. Review occurrenc

Troubleshooting

Use unique output names, confirm that rule packs match the project pair, and remove stale output files only th

Limitations

TBX, TMX and XLIFF are not supported. Rule coverage is pack-dependent. Microsoft Word repair-warning verificat
